

PART M: Clearing Course §4

THE LP (LINE PLOT) GPMs

The CREATION GPM

Whilst the Basic-Basic GPM of §4:Part I was the largest GPM series up to that point in the Clearing Course, this part M is the new largest GPM series. This part has 82 GPMs of 18 lines each. The patterns are all identical from one GPM to the next, the only difference being the *End Words*.

The first step is to brush off any available charge on the End Words themselves using the standard repeater technique to 3 consecutive no-reads or an F/N on each End Word. This also gives you an opportunity to clear any End Words which you do not understand. **Do not use standard word clearing.** Do not try to clear all definitions, derivation and get the word to F/N. Just get enough of the *appropriate* definition until you are happy with it, then move on.

Note that three of the End Words are marked with a *. The first word is from the 1966 LRH handwritten original. The second *may* be a later correction. Note which one of each pair reads, or reads best.

Next, start on the main block of the implant GPMs. Take each line to 3 consecutive no-reads or an F/N. An F/N on a line is not indicated to the pc, but is marked on this sheet. An F/N on any one line is not used to terminate the running of a GPM. However, F/Ns on three adjacent lines is reason enough to move onto the next GPM in the series.

Not every line needs to read. Use the buttons suppressed, invalidated and protested on unreading lines rather than back-tracking, in the first instance. For example, if the line was "TO CREATE BOOKS" you could check, "On – *To Create Books* – has anything been suppressed?" If that reads, get what the pc has to say about it. *Do not take this earlier similar and do not try to two-way comm it to F/N.* Just get what the pc has to say, then recheck the original item by calling "TO CREATE BOOKS". Only back-track if three items in a row don't either read or F/N.

Be careful not to go past a big win and persistent F/N. If you get a big win with a persistent F/N then end off auditing for that day.

If three GPMs in a row are just F/Ning then this part M is complete. Completing this part before running all 82 GPMs is quite reasonable because by running charge of the End Words first, and running the pattern multiple times on the first 10 to 20 GPMs, the whole structure of the implant has been exposed to view and erasure.

Ideally you should not end a session in the middle of one of the 82 GPMs. In other words complete the block of 18 items once you have started on it.

Say the phrase out aloud, spot the thetan, and say the phrase aloud whilst spotting the thetan. Do these in whichever way most easily produces reads. (Do not say the numbers.)
