DISLIKES									
NUMBNESSES									

Take the largest reading pre-assessment item from the list above and do a "running item list" as follows …

What [largest reading pre-assessment item] are connected with [original item]?

Example: If the original item is "*bronchitis*" and the largest reading item from the pre-assessment list above is "*mis-emotions*", the question asked is …

What ***mis-emotions*** are connected with ***bronchitis***?

Only the largest read is taken from the pre-assessment list. Only the largest read is taken from the running item list (unless the pc is not interested in it). Having handled the running item by R3RA Quad, a new pre-assessment is done.
