Read the question to the pc.
If there is no instant read, mark the question "X" (null) and go on to the next question.
When there is an instant read, mark the read (SF, F, LF, LFBD) and run that question repetitively to a cognition, complete with F/N and VGIs.

Do not take up an instant F/N. Pause, then ask the pc "Did anything occur?"
A "tick" is marked (T), but is not run. The smallest valid instant read is a SF (¼ inch).

If the pc has a major win on the subject, or regained ability, (complete with F/N and VGIs) then end off the prepcheck at that point.
